

Developing Number Fact Fluency

Led by Clare Christie, Number Sense Maths

As teachers, most of us see the value in helping children become fluent in their number facts, but it is often less clear precisely how we should do that. In this session we will look at the research into developing factual fluency in addition and subtraction facts, and what the implications are for classroom practice. We will share a clear framework and approach for supporting all children in your school to move beyond counting on their fingers to solve addition and subtraction facts which leaves nothing to chance and provides a proven way to achieve factual fluency for all.

Date; Thursday 14th October 2021

Time; 2-3pm

Delivered virtually via Zoom

Cost: £ 20 per person (not Boost funded)

Book via; www.bcpworkforcedevelopment.co.uk
